

Although UAC clearly improves the security on Windows Vista, under some scenarios you might want to disable it. You can disable UAC by using the following method:

Method #1 - Using MSCONFIG

1. Launch MSCONFIG by from the Run menu.
2. Click on the Tools tab. Scroll down till you find "Disable UAC" . Click on that line.

3. Press the Launch button.
4. A CMD window will open. When the command is done, you can close the window.
5. Close MSCONFIG. You need to reboot the computer for changes to apply.

You can re-enable UAC by selecting the "Enable UAC" line and then clicking on the Launch button.

***Recommended:** Speed up Vista boot times by reducing the number of programs that load at startup. [Control your Vista startup list with this Vista app](#)
